

**Amendments to the Claims:**

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A liquid crystal display, comprising:  
~~a first electrode;~~  
~~a second electrode opposing the first electrode;~~  
~~a plurality of pixel electrodes corresponding to a plurality of dots formed at overlapping portions of the first electrode and the second electrode;~~  
~~a reflector arranged outside the first electrode and the second electrode;~~ and  
a plurality of color filters, a color filter being arranged to correspond to each of the plurality of dots, the color filters being shaped so that individual dots of the plurality of dots include a light-transmitting area having a color filter and a light-transmitting area having no color filter, light-transmitting areas having no color filter in adjacent dots being separated by an area having no color filter.
2. (Original) The liquid crystal display according to claim 1, each color filter being located at a central portion of the dot.
3. (Original) The liquid crystal display according to claim 1, each color filter being divided into a plurality of parts.
4. (Currently Amended) A liquid crystal display, comprising:  
~~a first electrode;~~  
~~a second electrode opposing the first electrode;~~  
~~a plurality of dots formed at overlapping portions of the first electrode and the second electrode;~~  
~~a reflector arranged outside the first electrode and the second electrode;~~

a plurality of pixel electrodes corresponding to a plurality of dots, each dot being capable of reflective display; and

a plurality of color filters, a color filter being arranged to correspond to each of the plurality of dots, individual dots of the plurality of dots including an area having a color filter and an area having no color filter, areas having no color filter in adjacent dots being separated by an additional area having no color filter; and

a substantially transparent layer arranged to correspond to the areas having no color filter.

5. (Original) The liquid crystal display according to claim 4, at least one of the color filters having a thickness substantially equal to a thickness of the layer.

6. (Currently Amended) A liquid crystal display, comprising:

~~a first electrode;~~

~~a second electrode opposing the first electrode;~~

~~a plurality of dots formed at overlapping portions of the first electrode and the second electrode, the plurality of dots further comprising a first group of dots and a second group of dots; and~~

a plurality of pixel electrodes corresponding to a plurality of dots, each dot being capable of reflective display; and

a plurality of color filters, a color filter being arranged to correspond to each dot of the ~~first group, none of the color filters being arranged to correspond to any dot of the second group~~plurality of dots, wherein at least one color filter of the first group is shaped so that light is permitted to pass through the dot without passing through the color filter.

7. (Currently Amended) A liquid crystal display, comprising:

~~a first electrode;~~

~~a second electrode opposing the first electrode;~~

~~a plurality of dots formed in areas at overlapping portions of the first electrode and the second electrode~~ a plurality of pixel electrodes corresponding to a plurality of dots,  
each dot being capable of reflective display; and

a plurality of color filters, a color filter being arranged to correspond to each of the plurality of dots, ~~the~~ at least one color filter continuously extending beyond the area of each of the plurality of dots, the plurality of color filters being separated from each other by a substantially uniform pitch.

8. (Original) The liquid crystal display according to claim 7, no black mask being provided between each adjacent dot of the plurality of dots.

9. (Original) The liquid crystal display according to claim 7, individual dots of the plurality of dots being associated with different color filters which display different colors and the different color filters associated with individual dots not overlapping.

10. (Original) The liquid crystal display according to claim 9, the different color filters associated with individual dots contacting one another in an area extending beyond an area of a dot.

11. (Original) The liquid crystal display according to claim 9, the different color filters associated with individual dots being arranged so as to be separated from one another.

12. (New) A liquid crystal display, comprising:  
a plurality of pixel electrodes corresponding to a plurality of dots, each dot being capable of reflective display; and

a plurality of color filters, a color filter being arranged to correspond to each of the plurality of dots, the color filters continuously extending beyond the area of each of the plurality of dots and into contact with the color filters at adjacent dots.
